

Dr Tidu Mankoo Curriculum Vitae

Dr Tidu Mankoo qualified with a BDS from the University of Bristol in 1981 and has a renowned Private & Referral Practice in Windsor, UK, treating Implant, Restorative and Aesthetic cases and particularly complex cases. He has built a reputation for exceptional dentistry and carries out both the surgical and prosthetic aspects of his cases.

He was the President of the European Academy of Esthetic Dentistry (EAED) in 2009-2010, a visiting Professor at the International University of Catalunya in Barcelona, Spain and a founder and Past President of the British Academy of Aesthetic Dentistry (BAAD). He serves on the Editorial Board of a number of dental journals. He is a respected teacher with numerous publications. He is a sought-after international speaker particularly in the field of Dental Implants, Restorative & Aesthetic Dentistry and management of complex cases. He lectures and gives courses regularly all over the world. He is an active member of the European Academy of Esthetic Dentistry, the Association of Dental Implantology (UK), the European Association of Osseointegration (EAO), Fellow of the International College of Dentists (FICD), and a fellow of the International Congress of Oral Implantologists.

Implant and interdisciplinary therapy, from single teeth to complex aesthetic & restorative dilemmas: the surgical & prosthetic keys to success.

This presentation will review the contemporary surgical and prosthetic concepts in management of implants in the aesthetic zone with a view to achieving optimum long term aesthetics and stability.

The outcomes depend on the clinical management and an understanding and application of the biological factors that influence our treatment outcomes. The optimal management of the interplay between bone, soft tissues and prosthetics determines the aesthetic outcome and the long-term stability of soft tissue aesthetics. An interdisciplinary approach is the key to success. The aesthetic rehabilitation of multiple failing teeth and the periodontally compromised dentition remains a challenge despite the numerous advances in the treatment of periodontitis, regenerative and dental implant therapies. With this in mind, novel approaches for aesthetic rehabilitation of the compromised dentition in the aesthetic zone will be presented.

Participants will:-

- Learn the key principles for the diagnosis, treatment planning and management (both surgical & prosthetic) of implant restoration in the aesthetic zone
- Gain an understanding of the biology of the periodontal and peri-implant tissues and the application of this knowledge to clinical decision-making.

- Comprehend the behaviour of the bone & soft tissues around post-extraction sites and around dental implants
- Learn the principles of bone and soft tissue management around implants, as well as how to manage bone and soft tissue defects in post-extraction sites and peri-implant defects
- Learn to manage both delayed and immediate implants
- Be taught the keys to the management of single tooth and multiple tooth cases
- Learn the benefit of interdisciplinary case management
